

# Digital Retinal Imaging Screening

## Authorization Form

We are excited to announce that we have incorporated into our practice a new, highly sophisticated, computerized instrument that allows us to provide a more thorough medical analysis of your eyes. This procedure is now being recognized as the new standard of care. The procedure assists the doctor in the early detection of many disorders, including glaucoma, diabetic retinopathy, macular degeneration, retinal detachments and other vision threatening conditions. This allows the doctor to observe even the smallest change from the previous exam.

### We strongly recommend this procedure as part of your exam if:

1. You are a new patient to this office.
2. You have never had retinal photos of your eyes.
3. You are 65 or older.
4. You have or have a family history of high cholesterol, elevated blood pressure or any circulatory disorder.
5. You have or have a family history of diabetes or elevated blood sugar.
6. You have headaches or visual disturbances suggestive of a neurological problem.
7. You have or have a family history of elevated eye pressure or glaucoma.
8. You have any retinal disorder such as a detachment, tear, floaters, veils, flashing lights, bleeding or macular degeneration.
9. Your vision is not correctable to 20/20 in one or both eyes.

“Screening retinal photography” is a necessary part of your eye exam if you fall into any of the above categories. The charge for this procedure is \$20.00 and unfortunately is not covered by insurance at this time. If pathology or an “at risk” condition is documented with the screening photos, additional in-depth photos may be recommended, but should be covered by your insurance.

- Yes, I want this procedure.
- No, I do not want this procedure.
- I have other questions before I make this decision.
